

Our strengths and value proposition

We are everywhere, just around the corner

TSG operates the largest sales and service network in our industry across Europe and Africa. We are able to provide you with a global solution for your business internationally across 30 countries.

Thousands of TSG technicians and hundreds of sales reps serve our customers promptly and efficiently. Wherever you are, we are less than 60 km away.

We embrace sustainability as our common goal

Adopting electric vehicles can significantly reduce overall greenhouse gas (GHG) emissions, air pollution and noise levels which is a great benefit for environmental impact and an important step towards sustainability.

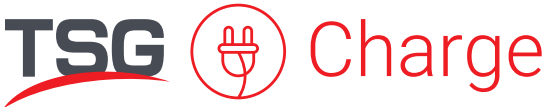

Overall we commit to help your company reducing its environmental footprint, putting our expertise at your service to support you in the transition towards more sustainable mobility.

We value quality and safety

As a European leader in implementing and maintaining EV charging infrastructure, TSG is paying the outmost attention in respecting high Quality and Health & Safety standards in all the realizations. We offer end to end project management covering every aspect of the installation process, using our own skilled people, providing excellent customer service and fast interventions.

We elaborate a tailored and turnkey solution for each customer

We have created strategic partnerships with industry leaders to allow us to offer the right solution for our customers. Whatever the budget, the available power or the complexity, we design the right solution to match your needs.

Enabling the electric future

Adoption of the Electric Vehicle (EV) is accelerating, with an average market gross of more than 40% year to year. European commission is targeting to get 4 Million EV and PHEV on the road by 2025.

This development is supported both by a wider offer of electrified cars from main manufacturers and strong supporting schemes from states including tax advantages and government subsidies.

E-mobility means fewer carbon emissions, zero air pollution, less noise and lower cost of ownership for the

end user. It definitely represents an important step towards sustainability in the context of the energy transition.

TSG Charge is striving to enable this transformation towards sustainable mobility by proposing its clients EV charging infrastructures, equipment and services.

Customers are looking for one single supplier to provide game-changing charging solutions with world-class installation and service: This is where TSG Charge comes in.

Future-proof your business with our EV expertise

TSG serves more than 100 customers throughout Europe and Africa. We supply to all sizes of businesses, from small transport companies with a single site to large multinationals operating a wide network of locations. We provide our customers with tailored solutions fitting their specific needs.

A Global Solution for E-mobility
