Keeping Fleets Moving Fleet Infrastructure by TSG Fuel

TSG Fuel brings together the expertise of TSG Retail and TSG Fleet, delivering a unified approach to fuel distribution, depot infrastructure and multi-energy solutions. Supporting both public forecourts and private fleet operations, TSG Fuel provides the systems that keep vehicles moving and businesses running.

For fleet operators, this means complete depot solutions, from fuel dispensing and electric charging to wash systems, energy management and compliance support. With nationwide engineering expertise and a fully integrated approach, TSG helps fleets reduce costs, maintain uptime and prepare for a multi-energy future with confidence.

Complete Depot Solutions Under One Partner

Integrated infrastructure for total fleet performance

TSG Fuel delivers the infrastructure that keeps commercial fleets running efficiently, whether diesel, electric or multi-energy. From high performance dispensers and AdBlue storage to advanced monitoring, compliance support and vehicle wash solutions, every element is designed, installed and maintained to operate seamlessly together.

With a unified approach across fuel, energy and data, fleet operators gain greater control, reduced downtime and full visibility of daily operations.

Fuel and Energy Dispensing

Fast, reliable refuelling

TSG supplies a full range of fleet dispensers designed for high throughput and durability, including diesel, AdBlue, LPG and gas solutions such as CNG and LNG. Engineered for demanding environments, these systems deliver consistent performance while reducing service interruptions and maintenance costs.

On-site fuelling removes reliance on external stations, saving time, reducing costs and improving operational efficiency.

Electric Fleet Charging

Powering the transition with confidence

TSG designs and installs scalable EV charging solutions tailored to depot operations. From initial planning through to installation and ongoing support, each system is built to meet current demand while allowing for future growth.

Depot charging allows vehicles to recharge overnight, reducing mileage costs and ensuring readiness for the next shift.

Smarter Control with LOGmaster

Total visibility. Complete control.

ProFleet LOGmaster gives fleet operators a single, intelligent platform to manage all depot activity. From fuel dispensing and EV charging to vehicle wash and site access, everything is controlled through one interface.

With real time monitoring, secure driver identification and automated reporting, LOGmaster helps reduce misuse, improve accuracy and deliver meaningful cost savings across the operation.

Commercial Vehicle Wash Solutions

Protect your assets and your brand

As an exclusive partner of Kärcher, TSG delivers robust, high performance wash systems for HGVs, vans and bus fleets. Automated gantry systems provide consistent, efficient cleaning for vehicles of all sizes, helping to extend asset life and maintain a professional fleet image.

On-site wash facilities reduce turnaround time and deliver long term operational value.

AdBlue and Emissions Solutions

Supporting cleaner, compliant operations

TSG supplies and maintains AdBlue storage and dispensing systems that meet ISO 22241 standards. Designed for reliability and accuracy, these solutions ensure vehicles meet emissions requirements while maintaining efficient daily operation.

Energy Management with TSG EnergyHUB

Control energy. Reduce cost. Improve performance.

TSG EnergyHUB integrates monitoring and optimisation across the depot, enabling dynamic load management, reduced peak-demand costs and improved operational efficiency.

Tank Monitoring with Normond Gauges

Reliable, cost-effective level monitoring

Robust, accurate and power independent, Normond gauges provide dependable fuel level monitoring for fleet environments where reliability is critical.

Service, Maintenance and Support

The core of everything we do

TSG provides comprehensive service and maintenance programmes to keep fleet infrastructure operating at peak performance. From preventative maintenance to emergency call outs, our nationwide engineering team ensures rapid response and minimal disruption.

Flexible contracts allow operators to choose the level of support that suits their business, with priority service available when it matters most.

Compliance, Maintenance and Specialist Services

Keeping your operations safe, compliant and fully operational

TSG Fuel supports every stage of the fuel lifecycle, delivering specialist services that protect assets, minimise risk and ensure full regulatory compliance.

Our capabilities include:

- Tank and fuel line cleaning
- Fuel sampling and contamination analysis
- Tank integrity testing and reporting
- Interceptor and drainage maintenance
- Vapour recovery testing (VRIB and VR2)
- Electrical testing and hazardous area compliance
- DSEAR risk assessments and support
- Emergency repairs and tank reinstatement
- Fuel polishing and ongoing fuel quality management

Why Choose TSG Fuel

- One of the UK's largest and most experienced fuel engineering teams
- Deep technical expertise across fuel systems, tank gauging and control technologies
- Specialist knowledge of both legacy infrastructure and modern energy solutions
- Fully compliant, safety-led approach aligned with UK regulations
- End-to-end support from inspection and maintenance to optimisation
- Nationwide coverage with rapid response and dependable service

Supporting the Transition to New Energies

Fleet operators are under increasing pressure to decarbonise. TSG supports this transition with infrastructure for electric, gas and alternative fuels, helping businesses move forward with confidence while maintaining operational continuity.

Fleet Solutions by TSG Fuel

One partner. Total control. Future-ready infrastructure.

TSG delivers integrated fuel, energy and control solutions for commercial fleets across the UK. From design and installation to service and optimisation, we support operators at every stage of their journey.
