# Keeping Forecourts Performing at Their Best

## Integrated systems for efficient, reliable and customer-focused operations

Delivered by TSG Fuel, our integrated forecourt solutions bring together fuel infrastructure, payment systems, vehicle wash, signage, lighting and maintenance to support modern retail settings.

Forecourts are evolving into multi-functional destinations where fuel, retail and new energy must work seamlessly together. This transformation calls for a more connected approach to infrastructure, ensuring every element performs efficiently and consistently.

### A unified approach to forecourt performance

TSG Fuel combines forecourt and fleet expertise to deliver a single, integrated solution. By aligning equipment, systems and services, we help reduce complexity, improve performance and maintain continuity across the site.

From design and installation through to service and maintenance, TSG provides a complete end-to-end offering. Every solution is tailored to the specific requirements of each location, enabling operators to maximise uptime, enhance customer experience and support long-term growth.

### Built for today, ready for tomorrow

As the industry transitions towards multi-energy operations, forecourts must adapt quickly. TSG supports this shift with scalable infrastructure, advanced systems and ongoing support, helping operators meet evolving expectations while maintaining reliability and compliance.

# Fuel Dispensing Solutions

## Reliable performance for busy retail environments

Our dispensing solutions combine proven engineering with advanced technology to provide accurate, reliable and efficient fuel delivery across forecourts.

Fuel dispensers are critical to daily performance, with reliability, accuracy and uptime directly influencing customer satisfaction and commercial success.

### Proven technology, built to last

TSG supplies industry-leading Tokheim and Wayne dispensers, engineered for long-term durability and precision metering. Modular designs allow flexible configuration across fuel types, flow rates and site layouts.

These systems are built with field-proven components that reduce maintenance

requirements while delivering consistent results, even in high-demand conditions.

### Supporting a changing energy mix

As forecourts diversify, dispensers must support a broader range of fuels. TSG solutions accommodate conventional fuels, LPG and AdBlue, ensuring sites remain compliant while preparing for future energy demands.

### Total lifecycle support

From specification and installation through to maintenance and upgrades, TSG ensures every dispenser performs efficiently throughout its lifecycle. This approach reduces downtime, controls costs and protects long-term investment.

## Payment and Site Control Connected systems for faster, smarter transactions

Our integrated payment solutions connect every part of the forecourt, bringing together transactions, equipment and site management into a single, efficient system.

Payment is central to the forecourt experience. It must be fast, secure and capable of supporting multiple services across the site.

### Intelligent site integration

At the core is the Prizma electronic point-of-sale (EPOS) platform, which integrates with dispensers, car wash, tank gauging and electric vehicle charging systems. This creates a unified platform where all activity is visible and manageable in real time.

### Faster transactions, better experience

Self-checkout, indoor terminals and outdoor payment solutions give customers flexibility while reducing queues and improving efficiency. These systems increase throughput while enhancing convenience.

### Secure and compliant by design

All solutions are fully compliant with Payment Card Industry Data Security Standard (PCI DSS) requirements, ensuring data security and transaction integrity. Combined with secure processing systems, they are designed to protect both operator and customer.

# Vehicle Wash Solutions

## Enhancing revenue, experience and site performance

TSG's vehicle wash solutions combine high-performance technology with flexible configurations to help forecourt operators increase revenue while improving the customer experience.

Vehicle wash facilities are no longer an optional extra. They play a vital role in attracting customers, increasing dwell time and generating additional income beyond fuel sales.

### **Built for reliability and throughput**

TSG works with Kärcher to deliver advanced wash systems suited to every forecourt setting. From compact jet wash units to high-capacity gantry systems, each solution is designed to deliver consistent cleaning performance with minimal downtime. For busy forecourts, high-throughput systems ensure efficiency during peak periods, helping maximise return on investment.

### **Flexible solutions for every site**

Recognising that every forecourt is different, TSG offers tailored wash configurations that align with site layout, customer demand and operational goals, allowing operators to choose between fully automated systems and self-service options while maintaining consistent quality.

### **Efficiency and sustainability**

Modern wash systems are designed to use resources efficiently. Many incorporate water reclaim technology, reducing consumption and lowering costs while supporting environmental targets.

With full support from installation through to ongoing maintenance, TSG ensures wash systems remain reliable and ready to perform every day.

# Signage, Branding and Lighting

## Creating a forecourt that attracts and performs

TSG's integrated signage, branding and lighting solutions help forecourts stand out, improve customer flow and create a safe and welcoming setting.

The appearance of a forecourt directly influences customer perception. Clean, well-designed sites encourage trust, increase footfall and support retail sales.

### Strengthening brand identity

Signage plays a critical role in shaping how customers experience a site. From canopy

branding and totem poles to promotional displays and directional signage, every element contributes to a clear, professional impression. Consistent branding builds recognition and reinforces customer loyalty.

### proving visibility and flow

Effective signage guides customers through the site, improving navigation and reducing congestion. Clear wayfinding enhances the customer journey, making it easier to refuel, shop and access additional services.

### Lighting for safety and impact

Lighting is essential for both safety and presentation, with well-lit forecourts improving visibility, discouraging unwanted activity and creating a sense of confidence for customers, while energy-efficient solutions help reduce running costs without compromising performance.

By combining branding, signage and lighting into a coordinated approach, TSG helps operators create forecourts that are both visually impactful and highly effective.

## Service and Site Support

### Protecting uptime, compliance and long-term performance

TSG's service and support solutions keep every part of the forecourt running safely, efficiently and in full compliance with industry regulations.

Forecourts rely on equipment that delivers consistently under pressure. Without effective maintenance, even the most advanced systems can become a risk to performance and profitability.

#### **Proactive maintenance for reliable performance**

Planned preventative maintenance helps identify potential issues before they impact the site. Regular inspections, servicing and calibration ensure that dispensers, payment systems, EV chargers and wash equipment continue to perform at peak efficiency.

This approach reduces unplanned downtime, avoids costly emergency repairs and extends the lifespan of critical assets.

#### **Rapid response when it matters**

TSG provides nationwide support through a dedicated team of highly trained engineers. From scheduled maintenance to urgent call-outs, our teams respond quickly to minimise disruption and restore normal service.

Flexible service agreements allow operators to choose the level of support that suits their business, from standard working hours to full 24-hour coverage.

#### **Care & Protect**

TSG's Care & Protect programme enhances both site presentation and operational performance, combining cleaning, inspection and maintenance across all forecourt assets. This ensures a clean, safe and professional setting that reflects the quality of the business.

With one trusted partner managing support, operators gain complete peace of mind.

# TSG UK Solutions

TSG delivers integrated solutions that support the design, delivery and operation of modern energy and transport infrastructure. From fuel systems and forecourts to electric vehicle charging, multi-energy infrastructure and site optimisation, TSG provides scalable solutions built for today and ready for the future.

Operating across forecourts, convenience retail and commercial settings, TSG combines engineering expertise, advanced technologies and comprehensive service support. This integrated approach enables businesses to run efficiently, maintain compliance and adapt to an increasingly complex energy landscape.

Our capabilities cover every stage of the lifecycle, from initial design and installation through to long-term maintenance and optimisation. By bringing multiple disciplines together under one roof, TSG simplifies delivery, improves consistency and reduces risk for customers.
